
JADON M. MONTGOMERY
432-305-5852

Jmontgomery16@angelo.edu

2601 W. Cuthbert Ave. Midland, Texas 79701

EDUCATION:

Pursuing Bachelors of Science in Mechanical Engineering, and a Minor in Chemistry at Angelo State University (2023 - current).

Associate of Science at Midland College (2019-2023).

High School Diploma at Early College High School at Midland College (ECHS) (2019 - 2023).

Current GPA (cumulative): 3.945

WORK EXPERIENCE:

Intern at Terracon Consultants Inc, 10400 TX-191 Frontage, Midland, TX 79707

(Summer of 2024)

- Worked in the materials department, where I performed slump tests, and load testing on concrete cylinders at various locations throughout West Texas.
- Worked in their geotechnical department, where I performed drilling observations to collect samples from locations, analyze samples, and assign samples for further testing. Performed other tasks when requested.

Math Lab Tutor at Angelo State University, 2025 Johnson St, San Angelo, TX 76909

(Fall of 2024 – Spring 2025)

- Would tutor anyone in need of help in math subjects from College Algebra up to Calculus 3.

SKILLS:

- CAD Experience: AutoCAD, SolidWorks, Fusion360
- Proficiency in Excel, PowerPoint, Word, and other various Microsoft office applications
- Basic electrical work (i.e., soldering, multimeter, etc.)

PERSONAL PROJECTS:

Mechanical Gravity-Powered Clock

- I have been designing a pendulum clock as a passion project of mine, and the endeavor has taught me a lot about engineering design principles.

Electrolysis / General Chemistry

- In the summer of 2024, I dissolved malachite with HCl, then performed electrolysis on the solution to isolate the copper.
- In the summer of 2025, I performed silver refining, a fairly complex chemical process involving strong acids and various chemicals with the correct safety precautions.

Metallurgy

- Over the winter break of 2024, I further processed the copper I had isolated into a small metallic nugget. The endeavor led me to pick up various tools for basic metallurgy.

EXTRACURRICULARS:

Rams & Rockets Treasurer / Vice President

(Treasurer in Spring 2024, and Vice President in Spring 2025)

- Rams & Rockets is a Student Organization at Angelo State University, where mechanical engineers can meet and have a place to practice their interest in rocketry, and pick up valuable skills for engineers as they compete in the NASA University Student Launch Initiative (USLI).

NASA USLI 2024-2025:

- The USLI is a rocketry competition where students would plan, design, construct, and test a high-power rocket that would go up from 4,000 to 6,000 feet and be launched for judging in Huntsville Alabama. I lead the recovery section on the rocket, where we designed an electronics bay that would deploy a drogue parachute and a main parachute to safely recover the rocket and use it for future launches. Additionally, I assisted in setting up a bake sale and t-shirt fundraiser for getting additional funding for the Student Organization.
